

SONIC WORLDS

Welcome to your new “Playing Cards - Basics” sound library.

This library was created with Games in mind. As such we carefully chose from our larger comprehensive Playing Cards library 20 of the most commonly used Card sounds used in games.

The sound were recorded with a Close perspective that provides that “in your face” impact for when you need to make a strong impression, ideal for gaming applications.

If you ever want to upgrade to the larger library, feel free to drop me a line.

The sounds are given in 3 different format variants:

- WAV 44.1kHz 16 bit. The industry standard *uncompressed* format commonly used for games and media. Rather than embed album artwork into each sound, the artwork is included in the folder to reduce file size.
- WAV 96kHz 24bit. This is the highest quality format for professional audio post production. Artwork has been embedded into each file.
- MP3 Highest VBR: This is the standard lossy compressed format commonly used in games that require smaller file size. Rather than embed album artwork into each sound, the artwork is included in the folder to reduce file sizes.

Specifications:

- 20 Sounds
- 20 Files
- 96kHz/24bit ; 44.1kHz 16bit MONO WAV format.
- MP3 format at highest VBR
- Extracted size is 20MB.
- BWF and SoundMiner Metadata has been embedded into the library.

I’m very personable, so please feel free to contact me with any queries, questions, and even requests.

I wish you much success using it!
