

SONIC WORLDS

Welcome to your new “Orc” sound library.

This library was created with with game designers in mind, and caters to all the classic actions needed for Orc characters.

Each expression contains 3-5 variations with a total of 51 vocalizations.

When dealing with vocal libraries, don’t feel locked into the tags and descriptions. Indeed a few of the expressions have even been marked in the metadata as having multiple potential uses. For example a “badly hurt” vocal could also be used as a “heavy attack” vocal. Or phrases could be used both as an *acknowledgement* or *casting a spell*. Let your ears be your guide based on your specific production.

The sounds are given in 3 different format variants:

- WAV CD Standard: 44.1kHz 16 bit. This is the industry standard uncompressed format commonly used for games and media. Rather than embed album artwork into each sound, the artwork is included in the folder to reduce file size.
- WAV Film Standard: 48kHz 24bit. This is the industry standard uncompressed format for film production. Artwork has been embedded into each file.
- MP3 128kbs CBR: This is the standard lossy compressed format commonly used in games that require smaller file size. Rather than embed album artwork into each sound, the artwork is included in the folder to reduce file size.

Note: If you require a different format for your production or a smaller size MP3, convert from the uncompressed WAV files rather than the MP3's. Converting or compressing already compressed MP3s results in degradation to the new sounds. Converting from the WAV files nullifies this.

- The WAV files includes BWF and Soundminer metadata for easy searchability.
